

Rahish Khan

Senior Flutter Developer | Mobile Architecture

9958801488 | kxanrahish776@gmail.com | [linkedin.com/in/rahish-khan](https://www.linkedin.com/in/rahish-khan) | github.com/Pathaan776 | Sahibabad, Ghaziabad, Uttar Pradesh 201005 (Delhi NCR)

PROFESSIONAL SUMMARY

Flutter developer with 6+ years who has been running a team of four at Pay10 since 2024 and setting the architecture they build against. Two wallets are live and I built the mobile layer of both: Pay10 UAE, 2,000+ active users in production, and Pay10 India, an RBI licensed PPI wallet that reached Google Play in September 2026 after Pay10's NPCI approval. Before Pay10, four years at Quick Web Codes, around 50 apps across blockchain, fintech and e-commerce.

CORE SKILLS

Leading the work: Team of 4 developers, code review, mentoring, sprint planning, Agile/Scrum, Jira, requirement analysis, stakeholder communication

Architecture: Clean Architecture, MVVM, modular and shared-module design, platform and method channels, go_router, OOP

Flutter and mobile: Flutter, Dart, BLoC, Cubit, GetX, Provider, Riverpod, Flutter Web, Android (Java/Kotlin), iOS, cross-platform development, push and local notifications

APIs and data: REST APIs, JSON, payment gateway integration, secure token handling, Firebase (Auth, Firestore, Crashlytics, Cloud Messaging), MySQL, SQLite, Sqflite

Build and release: Git, GitHub, CI/CD, Play Store and App Store releases, Android Studio, Xcode, Figma

Domain: FinTech, digital wallets, UPI and QR payments, KYC and onboarding, UAE market, blockchain and Web3, e-commerce

PROFESSIONAL EXPERIENCE

Pay10, Delhi | Flutter Developer | May 2024 to Present

Pay10 India, Google Play: <https://play.google.com/store/apps/details?id=in.pay10.wallet.app>

Pay10 UAE, Google Play: <https://play.google.com/store/apps/details?id=ae.payten.wallet.app>

Pay10 UAE, App Store: <https://apps.apple.com/in/app/pay10-uae/id6739810874>

- Set the Clean Architecture and MVVM structure both Pay10 apps are built on, with shared modules so common flows are written once, not per screen.
- Four developers work to me day to day: task breakdown, sprint planning, code review and one to one time when someone is stuck. Requirements reach me directly from business stakeholders in India and the UAE.
- Built Pay10 India on the Flutter side and took it to release: UPI and QR payments, transfers by mobile number, wallet top up, recharges and bill payments. Live on Google Play since September 2026.
- Pay10 UAE has been in production since 2024 with 2,000+ active users. Scan and Pay, account linking, fund transfers and Emirates ID OCR based KYC are mine.
- The state management call is made per feature across BLoC, Cubit, GetX, Provider and Riverpod. Forcing one pattern app wide causes more problems than it solves.
- Production crashes escalate to me. Crashlytics and DevTools to find them, and the cause goes back into what we look for in review.

Quick Web Codes, Ghaziabad | Flutter Developer | January 2020 to May 2024

- KOOP Wallet: a non-custodial wallet covering 7 chains including BTC, ETH and BSC. Private keys are generated on the device and stay there, never on a server.
- Trust Coin and ZZNEX BOT, two crypto trading apps that run unattended, with encrypted trade execution and risk limits the user sets themselves.
- MI Pro (MI Token) was a BEP-20 token platform with a capped supply and a burn mechanism. AI-Network was a mining app where rewards came from completing tasks.
- AYA-Store and Samron Market: direct selling and e-commerce, with referral trees, distributor commission tracking and payment gateway integration.
- Four years agency side, roughly 50 apps. That meant client calls, architecture, the build and the post launch fixes, not just writing screens.

EDUCATION AND CERTIFICATIONS

B.C.A. Computer Applications, Swami Vivekanand Subharti University, Meerut. 2019 to 2022, 70%.

Senior Secondary (XII), GMSSS Faridabad, 2018, 64%. Higher Secondary (X), GMSSS Faridabad, 2016, 62%.

Flutter and Dart Certification, Ducat Institute.
